

PRODUCT TECHNICAL DATA SHEET

TRAFFEX - Super Concentrate T.F.R. and Chassis Cleaner

DESCRIPTION

TRAFFEX has been designed to provide a powerful yet safe traffic film remover that will be useful across a wide spectrum of vehicle cleaning applications including chassis cleaning prior to inspection.

It is designed for use through high pressure water jets, steam cleaners application and normal water pressure removal.

TRAFFEX contains extremely powerful wetting and dispersing agents in conjunction with a blend of emulsifying compounds which results in a synergistic blend of electrolyte solution. In practice this new formulation enables even the most stubborn residual film to be completely rinsed away by the final wash.

TRAFFEX does not solely rely upon powerful alkaline components of its strength as is common practice with conventional T.R.R.s, but combines a selection of higher grade chemicals to provide the desired result.

Ensure that the vehicle is thoroughly sprayed with a dilute solution of TRAFFEX. An effective working rate would be to start at approximately 400:1 through a pressure wash machine and reduce concentration as required. It is quite possible to achieve up to 800:1 in some applications.

IMPORTANT: AS WITH ALL CHEMICAL PRODUCTS, AVOID EXCESSIVE FEED RATES AS PAINTWORK CAN BE DAMAGED.

When completely saturated with the diluted solution, the area must be rinsed with water until all traces of which have been removed.
