

PRODUCT TECHNICAL DATA SHEET

PALMEX - Germicidal Hand Cleaner

DESCRIPTION

PALMEX is a germicidal hand cleaner, formulated from mild, yet most thorough cleansing compounds available. PALMEX is a pearlized viscous orange liquid, designed for both economy and hygiene purposes, for use in either wall fixtures or from the container.

PALMEX, apart from its distinct colouring, has a further special feature in that it has been pleasantly perfumed with tangerine. PALMEX has proved both efficient and versatile in many industries, schools, offices, etc., for the removal of oils, grease, carbon and many other contaminants. PALMEX is kind to skin in that it contains compounds to soften and protect as well as clean.

DIRECTIONS: Apply PALMEX straight from the dispenser to tub or dry skin, and work in thoroughly, in order to lift and disperse the soiling. Rinse thoroughly with clean water to remove soiling, leaving skin clean and soft.

PALMEX does not just stop there, its versatility enables it to be used for functions such as in showers, etc. Also PALMEX used before work will assist in protecting hands from both the cold and for general daily tasks which normally dry out the skin.

STORAGE: No special storage requirements are necessary and the waste product may be disposed of to drain as it is biodegradable.

Rinse all spillages otherwise they will become a slip hazard.
